Google Maps

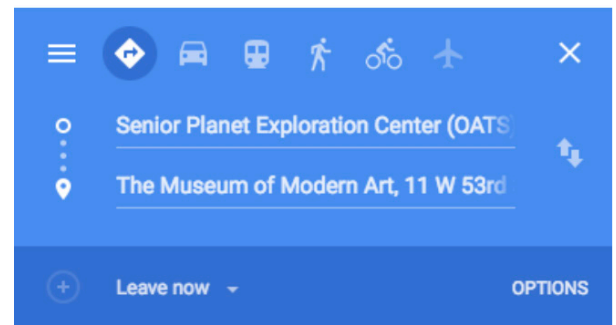

What is Google Maps?

- A web-based map service
- Aerial and satellite views allow you to virtually visit just about any place in the world!
- Receive accurate directions for walking, public transportation, and driving.

How to use Google Maps

- Access [Google Maps](#) from your computer's web browser
- Use the app on your Android or iOS device
- Enter your desired destination. If using Maps in a web browser, you'll also need to enter your point of departure.
- Choose your mode of transportation.

Features and Functions

- Search terms: entering key words will result in a list of locations (e.g. food, hotels, eye doctor, etc.)
- Street view: allows you to see the actual street
- Walking directions: click on the walking icon and a trail will map the way to your destination.
