

IoT & Smart Cities

What is a smart city?

- A municipality that uses Internet of Things (IoT) technology to improve government efficiency, better communicate with residents, and improve their lives.

Smart cities impact three main areas:

- Mobility
- Open data
- Smart buildings/infrastructure

What smart cities do:

- Gather and analyze data about how the city works
- Improve operations
- Provide better, personalized services to residents
- Improve residents' health
- Improve sustainability and energy efficiency

Benefits of a smart city:

- Find parking and public transportation more easily
- Receive live updates on traffic and street navigation
- Report an incident or a problem with public infrastructure
- Find barrier-free routes
- Use audible or vibro-tactile signals for pedestrians
- Pay electronically in select stores
