

AI Image Generators

The Basics

- AI software is trained using machine learning and massive amounts of data to find patterns and turn textual descriptions (prompts) into images
- Makes creating all kinds of art, illustrations, and photo-realistic images easy, fun, and fast!
- Create limited images for free with AI chatbots: [ChatGPT](#), [Google Gemini](#), [Microsoft Copilot](#), [Meta AI](#)

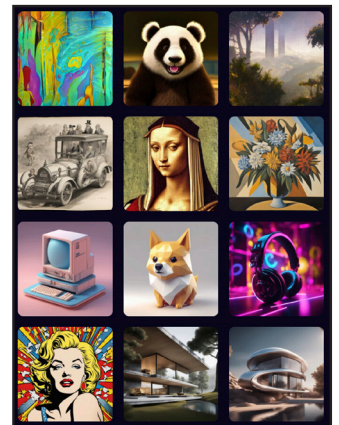

Prompt:

Monet style painting of a cowboy in a field of bluebonnets (created with Dream Studio)

Common Features

- Available as websites and mobile apps
- Most offer a free account with a limited amount of images, then require paying for a subscription or buying credits for more
- Text-to-image: Enter a detailed description and see what AI creates
- Some have additional editing capabilities
- Download, save, or share your images
- More image generators: [DeepAI](#), [Canva](#), [Adobe Firefly](#), [Dream Studio](#), and [Midjourney](#)

Tips

- Compare features and choose a tool that suits your needs
- View image galleries to see range of styles and examples
- Experiment with writing different descriptive prompts
- Ask an AI chatbot to help you write better prompts
- Check FAQs, Privacy Policies, and Terms of Service for each platform to find out about content ownership, copyright policies, data collection, etc.
